SS

Shashank Shankar

Performance Marketing Analyst at Cube · Bengaluru

Paid search that pays back.

I run Google and Microsoft Ads for 20+ e-commerce and lead-gen accounts. I fix measurement first, then rebuild accounts around real purchase data and non-brand demand.

CASE STUDIES

CLIENT NAMES WITHHELD

PRECIOUS-METALS DEALER · $6.9K AVERAGE ORDER

−78%

cost per online purchase, $151 → $34

Bidding on the conversion that pays

The account bid for calls and store directions. Smart Bidding was chasing cheap, low-intent actions and never learning who actually buys online.

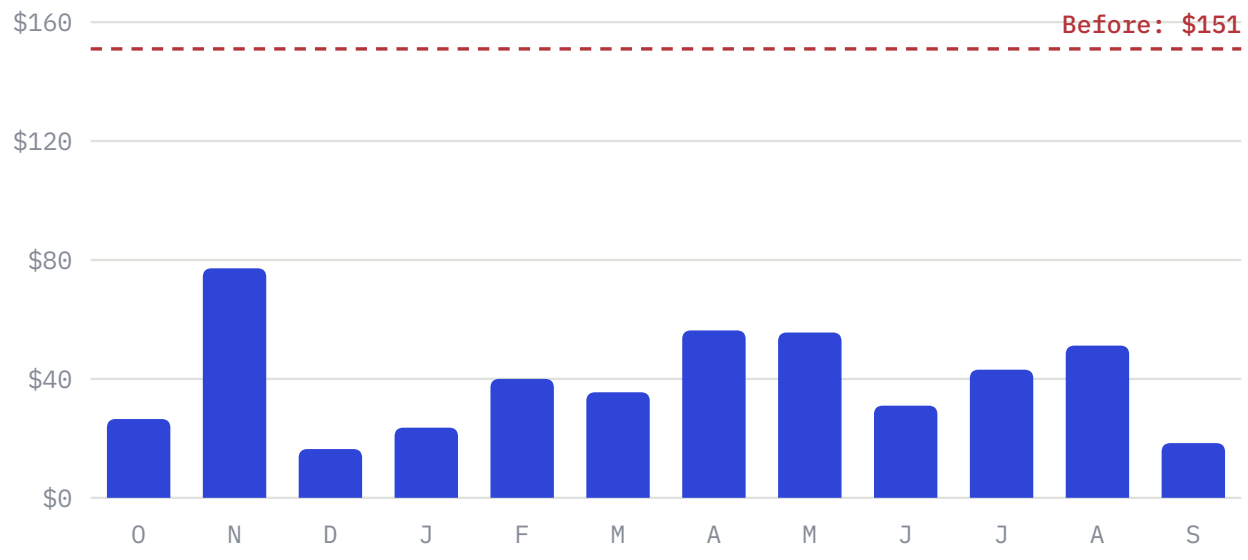

I made the online purchase the only conversion the account bids for, and kept calls and directions as observation-only actions.

WHAT I LEARNED I check which conversion action bidding is optimising for before touching budgets or bids on any new account.

Google Ads API · GA4 purchase action · Oct 2025 – Sep 2026 vs Nov 2024 – Feb 2025

Cost per online purchase, by month

Every month under me came in below the old $151 average

HOME-HARDWARE D2C · ~$720K A YEAR

3.31 → 3.60

ROAS in my first 12 months vs the 12 before, on 13% less spend

More return on less spend

- Made non-brand Performance Max the main engine, growing it from $7.7K to $31.6K a month.
- Added a high-AOV Performance Max, a tighter brand campaign, best-seller Shopping and Demand Gen.
- Retired the old general-brand and manual Shopping campaigns.

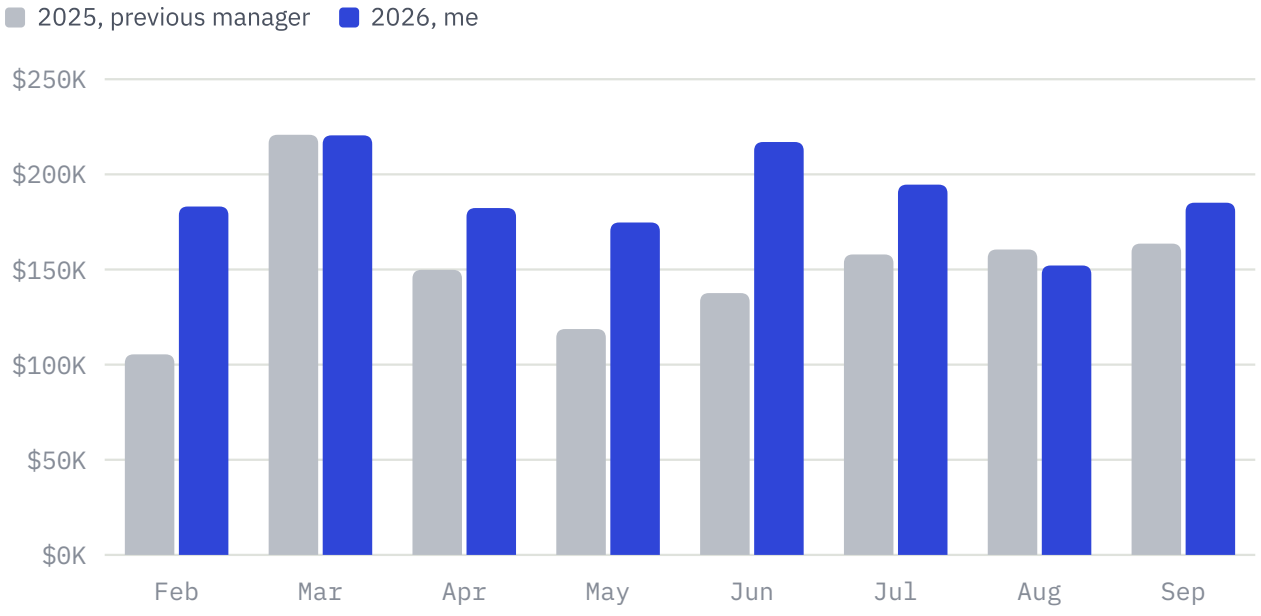

-8.5% cost per conversion	**2.98 → 3.41** holiday-quarter ROAS, a third less spend	**-23%** cost per order, Aug–Sep YoY

WHAT I LEARNED A Walmart Demand Gen campaign showed zero conversions in Google Ads, but ThoughtMetric credited it with $32.5K in sales in a month. I judge top-of-funnel on assisted sales.

Google Ads API · ThoughtMetric · took over Oct 2025

Google Ads sales by month, ThoughtMetric

Feb–Sep: +24% sales on +15% spend, year on year

D2C EYEWEAR · ~$40K A MONTH

13 → 5

spending campaigns, on flat year-on-year spend

Consolidation and clean tracking

- Cut lines returning under 1.5 ROAS: dynamic search, old Shopping, non-brand Search.
- Rebuilt Shopping around 15 products; it grew from $200 to $11.6K a month.
- Merged four overlapping purchase tags into one. They had recorded $11.6M of conversion value in a single month on $38K of spend.

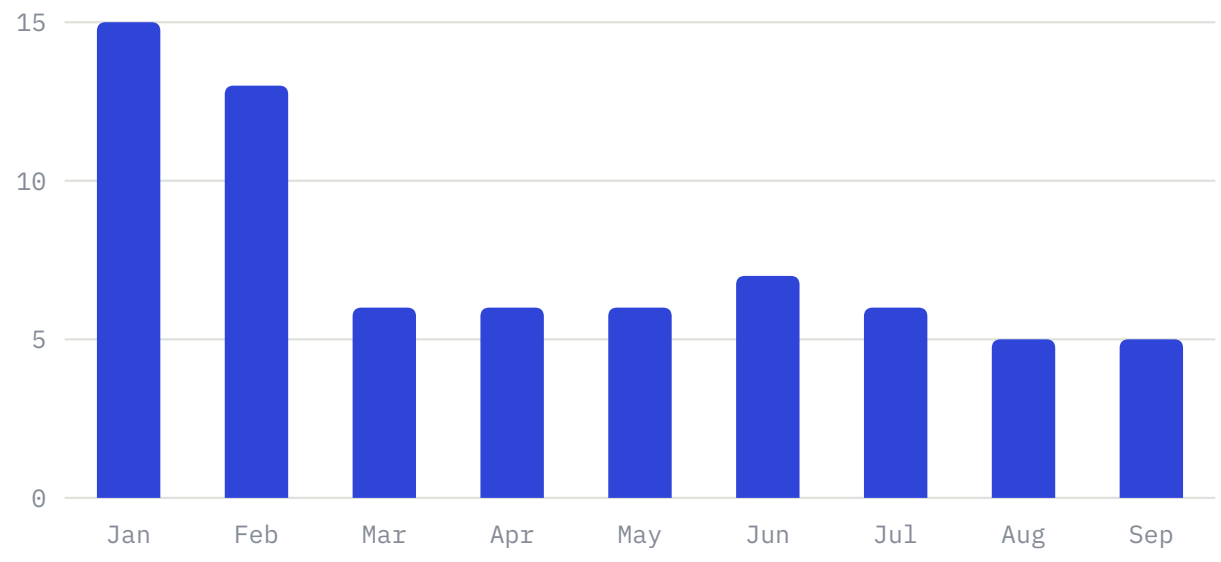

+36% Google sales Q1 → Q3, on +30% spend (Shopify)	**+10%** order value, $64.73 → $71.22	**-14%** spend to match Q4 2025's sales in Q3

WHAT I LEARNED Later the purchase action drifted to about 1.8× what GA4 and Shopify saw, so I report this account on Shopify numbers, not the platform's.

`Google Ads API (structure, spend) · Shopify last non-direct click (sales)`

Campaigns with spend, by month (2026)

Fewer, larger campaigns give Smart Bidding more data per campaign

RECOVERY-DEVICE BRAND · ~$2K A MONTH

4×

non-brand conversions a month, at 6% lower cost

Building demand beyond the brand name

The account was one brand Shopping campaign at 22× ROAS, but 82% of sales came from people already searching the brand. It wasn't finding new buyers.

I rebuilt it in June 2026 with Performance Max, Shopping and non-brand Search, then mined search terms every month and turned winners into asset groups and feed titles.

106 / 113 converting non-brand terms new to the account	**1 → 24** converting terms in the travel / jet-lag theme	**109 → 341** Google paid orders, May → June

Cube monthly reports and non-brand review · account has since churned

Non-brand conversions per month

Average before the rebuild vs the three months after

Cost per non-brand conversion

AUDITS WHAT I FIND IN A NEW ACCOUNT

CHAMPAGNE GIFTING BRAND · JUNE 2026

1.66 → 2.76

Performance Max ROAS after the rebuild (Aug–Oct vs Apr–Jul 2026)

Audit, then rebuild

The account looked healthy at 4× ROAS. Underneath, most of it was switched off or fighting itself. I rebuilt Performance Max around gifting intent, put the hero products back in the feed and removed the category negatives.

8.0 → 11.0	**4.87**	**+22%**
brand Search ROAS	account ROAS, Aug–Oct 2026	revenue on +15% spend

My audit deck · results from the Google Ads API

2 / 25	campaigns actually spending
89%	impression share lost to rank on the keyword driving 61% of conversions. The tROAS target was 20×; it delivered 7–8×.
3×	higher brand CPC after AI Max was switched on, with no extra conversions
1,552	Performance Max negatives blocking the brand's own category, like "gifts" and "champagne"
6 / 13	hero products missing from the feed, while 190 budget products spent $763 for nothing
31%	of products disapproved after Merchant Center rejected the alcohol authorisation

DIAMOND-JEWELLERY BRAND · JULY 2026

891×

the ROAS the account was reporting

The ROAS that wasn't

99.97% of its 16,856 "conversions" were add-to-carts. There were zero purchases in 12 months.

`Diagnosis only, no results claimed`

THE REBUILD PLAN I PROPOSED

01 **Fix tracking**
Purchases only as the primary conversion.

02 **Non-brand Search by country**
Manual CPC while there's no purchase data to learn from.

03 **Shopping**
Once the feed and tracking are clean.

04 **Performance Max**
Only after 30+ real purchases.

AD COPY BRAND NAMES REMOVED

Headline refresh for a UK healthcare retailer

Performance Max asset group · Aug 2026

Four headlines used "Medical" or "Rehab", which triggers Google's health restriction on personalised ads and had switched off remarketing and Customer Match. The rest were generic. I replaced them with the categories that actually converted in Q4 search terms.

– ~~Top Medical Supplies and Rehab~~	~~policy~~
– ~~Leading UK Medical Supplier~~	~~policy~~
+ Commodes & Toilet Aids	18 conv. in Q4
+ Cushions & Bed Pads	16+ conv.
+ Insoles for Knee & Joint Pain	search theme

Preorder launch for a leather phone-case brand

Performance Max assets · Sep 2026

Buyers were early adopters looking for a case before most brands had one, so the copy leads with the exact device, the ship date and what sets it apart.

+ Detachable Wallet Folio	23/30
+ 3-Year Warranty Included	24/30

HOW I DIAGNOSE A ROAS DROP

IN THIS ORDER

01 **Impression share**

Are we losing auctions to rank or to budget? The fixes are different.

02 **Bidding**

Is the tROAS target realistic for what the campaign delivers, or is it throttling volume?

03 **Channel mix**

On Performance Max, is spend drifting into Display, Gmail or Discover placements?

04 **Products**

Best sellers out of stock, Merchant Center disapprovals, feed issues.

05 **Tracking**

Compare Google Ads with Shopify and GA4. A broken tag looks exactly like a ROAS crash.

Only then do I change bids or budgets.

TOOLS AND BACKGROUND

Google Ads Transparency Scraper

Apify Store · Python, Selenium, Tesseract OCR

Checks whether any domain runs Google Ads, pulls its image and video creatives and reads the ad copy with OCR. 46 users, 21K+ runs.

Client report automation

GAQL · MCP

Weekly and monthly Google Ads client reports generated straight from live account data.
